

EYE HOSPITAL MANAGEMENT SYSTEM

1 Admin Module – Activity Documentation

1.1 Overview

The Admin module manages the overall system operations including user management, patient management, payment handling, and analytics monitoring.

1.2 Activity Flow Description

1. **Login**
2. **Manage Doctor**
 - Register Doctor
 - Delete Doctor
3. **Manage Lab Assistant**
 - Register Lab Assistant
 - Delete Lab Assistant
4. **Manage Patient**
 - Register Patient
 - Delete Patient
5. **Manage Payment**
 - Monitor and manage payment records
6. **Analytics Dashboard**
 - View Total Patients
 - View Revenue
 - View Pending Lab Tests
7. **Logout**
8. **End**

1.3 Functional Responsibilities

- User authentication
- Staff account management
- Patient record control
- Financial monitoring
- System analytics supervision

2 Doctor Module – Activity Documentation

2.1 Overview

The Doctor module allows doctors to access patient records, review lab results, monitor visual acuity logs, and provide diagnosis.

2.2 Activity Flow Description

1. **Login**
 - Enter credentials
 - If invalid → return to Login
 - If valid → proceed to dashboard
2. **View Patient List**
 - Access registered patients
3. **Medical Record Access**
 - View patient medical history
 - Review AI prediction results
4. **Lab Referrals**
 - Refer patient for lab tests
5. **Visual Acuity Log**
 - Record and monitor visual acuity reports
6. **Logout**
7. **End**

2.3 Functional Responsibilities

- Patient diagnosis
 - Access to medical history
 - Lab test referrals
 - Monitoring visual acuity
 - Reviewing AI-generated predictions
-

3 Lab Assistant Module – Activity Documentation

3.1 Overview

The Lab Assistant module manages test queues, image uploads, and report generation for disease prediction.

3.2 Activity Flow Description

1. **Login**
 - Enter credentials
 - If invalid → return to Login
 - If valid → proceed

2. Test Queues

- Pending
- In Progress
- Completed

3. Upload Images

- Upload retinal fundus images
- System processes image for AI prediction

4. Report Generation

- Generate lab report
- Update status to completed

5. Logout

6. End

3.3 Functional Responsibilities

- Manage diagnostic workflow
- Upload retinal images
- Track test progress
- Generate diagnostic reports

System Workflow Summary

1. Admin manages users and system data.
2. Doctor examines patient records and provides medical decisions.
3. Lab Assistant uploads retinal images and generates AI-based reports.
4. The Machine Learning model assists in predicting eye diseases.
5. The workflow ensures secure login, structured process flow, and controlled logout.

Conclusion

This clearly represent the functional workflow of Admin, Doctor, and Lab Assistant modules in the Eye Hospital Management System. Each module has secure authentication and role-based operations. The system ensures smooth coordination between staff members. The integration of AI enhances diagnostic accuracy. Overall, the structured workflow improves hospital efficiency and patient care quality
